

# Subscribers

## Creating A New Subscriber

Now that domains and applications have been set up let's write some code! I will start with subscribers because this is the most simple domain.

The subscriber form is pretty simple:

The screenshot shows a web form titled "New Subscriber". It contains the following fields:

- FIRST NAME**: A text input field containing "Jane".
- LAST NAME**: A text input field containing "Doe".
- E-MAIL**: A text input field.
- FORM**: A dropdown menu with a downward arrow, currently showing a hyphen "-".
- TAGS**: A list of tags: "Laravel", "Vue", "MySQL", "Inertia", and "DDD" (partially visible).

At the bottom of the form are two buttons: "Save" (in blue) and "Cancel" (in light blue).

A subscriber can have only one form but many tags. Now let's take a look at the subscriber model:

```
class Subscriber extends BaseModel
{
    protected $fillable = [
        'email',
        'first_name',
        'last_name',
        'form_id',
        'user_id',
    ];
}
```
