

Let me show you an example. This is a snippet from one of my applications I wrote on Oct 28, 2016, after finishing the Design Patterns book. Take a look at it (it's not Laravel):

```
class Search_View_Container_Factory_Project
{
    /**
     * @var Search_View_Container_Relation_Project
     */
    private static $_relationContainer;

    /**
     * @param array $data
     * @return Search_View_Container_Project
     */
    public static function createContainer(array $data)
    {
        if ($data['current'] == 'complex') {
            return self::createComplex($data);
        } else {
            return self::createSimple($data);
        }
    }
}

/**
 * @param array $data
 * @return Search_View_Container_Project
 */
private static function createSimple(array $data)
{
    $container = new Search_View_Container_Project('simple');
```
