```
        return;
    }

    this.$inertia.get(this.model.subscribers.next_page_url);
  },
  prevPage() {
    if (!this.model.subscribers.prev_page_url) {
      return;
    }

    this.$inertia.get(this.model.subscribers.prev_page_url);
  },
}
```

Where is the user ID?

This is the query in the `GetSubscribersViewModel` :

```
Subscriber::with(['form', 'tags'])
    ->orderBy('first_name')
    ->get()
    ->map(fn (Subscriber $subscriber) =>
SubscriberData::from($subscriber));
```

You can see there's no user id in this query. That's because I'm using a global scope that adds a where condition to every query:
